**CONTROLLED EXPANSION LIQUID**

**PHOSPHATE INVESTMENTS**

**SPECIAL LIQUID CONCENTRATE**
- Formulated for use with X-20 Chrome, 5X-20 Speed, Ceramiclux, 16-Temp, Cerabond and Hi-V. 
- Prevents slumping.

**POLYVEST**
- Safely invests for Porcelain with Medium Range Thermal Expansion
- High strength, accurately reproduces crown and bridge patterns quickly
- Fine-grained material for smooth surface
- Can be used for both crown and bridge alloys

**V.H.T. INVESTMENT**
- Safely invests for Porcelain with High Thermal Expansion
- High strength, accurately reproduces crown and bridge patterns quickly
- High thermal expansion for perfect fitting veneers
- Smooth, hard surfaces for super fit

**DISPOSABLE PLUNGERS**
- Made from material similar to investment, reduces devesting time
- No cleaning required—just dispose of plunger when finished
- Can be used with any type of pressable ceramics

**REFRATORY INVESTMENTS**

**DIRECT-FIRING CERAMICS**

**SOLDERING INVESTMENT**
- High strength and heat shock resistant
- Smooth, hard surfaces for easy investing
- Fine-gained material for smooth surfaces
- Easy to invest

**HIGH-HEAT SOLDERING INVESTMENT**
- High thermal expansion
- Excellent with high-fusing ceramic and base metals
- Smooth, hard surfaces for super fit

**INVESTMENTS**
- The universal investment for all alloys and pressable ceramics.

This high-performance, universal investment meets equally for all alloy and pressable ceramics. Its wide expansion range allows the technician to achieve optimal fit for a variety of materials. The robust bimodal nature of Formula 1 strengthens the mold and promotes easier devesting when working on more fragile materials such as all-ceramic restorations. Using only a 15-minute furnace and 15 minute burnout, Formula 1 reduces processing time and increases lab productivity.

- Use investment for both crown and bridge alloys and pressable ceramics.
- High strength and heat shock resistant
- Smooth, hard surfaces for superior fit
- Excellent with high-fusing ceramic and base metals
- Can be used for both crown and bridge alloys
- Smooth, hard surfaces for super fit

**PHOSPHATE INVESTMENTS**

**INVESTMENTS**

- The universal investment for all alloys and pressable ceramics.
**SOLDERING INVESTMENTS**

**HIGH STRENGTH FOR ALL DENTAL ALLOYS**

**DISPOSABLE PLUNGERS**

Enhance your clinical performance and productivity in the dental laboratory. These disposable plungers are easy to use and cost effective. They are made from high-quality materials that ensure durability and reliability.

- Designed for precise and accurate dispensing
- Easy to use and maintain
- Great for handling complex compounds

**SOLDERING INVESTMENT**

- High strength and heat shock resistance
- Smooth and consistent flow for easy handling
- Rapid devest

**PHOSPHATE INVESTMENTS**

**FORMULAS**

- Formula 1: 1,350 psi (9.2 MPa) Compressive Strength
- Thermal Expansion: 0.65%
- Setting Expansion: 1.6%
- Working Time: 6–8 minutes
- Liquid/Powder Ratio: 22 mL/100 gram

**HIGHER FUSION**

- High-fusing ceramic alloy for use in dental applications
- Excellent with high-fusing ceramic alloys for pre- and post-soldering
- Wide expansion range
- One investment for both crown and bridge alloys

- Advantages:
  - Advanced hybrid formula strengthens molds and resists wear
  - Rapid and standard burnout enables immediate burnout in cone-shaped burnout units
  - Advanced burnout eliminates need for catalysts

**HI-HEAT SOLDERING INVESTMENT**

- For high-fusing precious and base metals
- Excellent with high-fusing precious alloys for pre- and post-soldering
- Wide expansion range
- One investment for both crown and bridge alloys

- Advantages:
  - Advanced hybrid formula strengthens molds and resists wear
  - Rapid and standard burnout enables immediate burnout in cone-shaped burnout units
  - Advanced burnout eliminates need for catalysts

**POLYVEST**

- High temperature investment for pressable ceramics with wide range thermal expansion
- Excellent with high-fusing precious alloys for pre- and post-soldering
- Wide expansion range

- Advantages:
  - Advanced hybrid formula strengthens molds and resists wear
  - Rapid and standard burnout enables immediate burnout in cone-shaped burnout units
  - Advanced burnout eliminates need for catalysts

**REFRACTORY INVESTMENTS**

- High thermal expansion
- Excellent for all alloys and pressable ceramics
- Advanced burnout eliminates need for catalysts
- Rapid and standard burnout enables immediate burnout in cone-shaped burnout units
- Completed with pre-exposed liquid for easy devest

**POLYVEST**

- High temperature investment for pressable ceramics with wide range thermal expansion
- Excellent with high-fusing precious alloys for pre- and post-soldering
- Wide expansion range

- Advantages:
  - Advanced hybrid formula strengthens molds and resists wear
  - Rapid and standard burnout enables immediate burnout in cone-shaped burnout units
  - Advanced burnout eliminates need for catalysts

**HI-HEAT SOLDERING INVESTMENT**

- For high-fusing precious and base metals
- Excellent with high-fusing precious alloys for pre- and post-soldering
- Wide expansion range
- One investment for both crown and bridge alloys

- Advantages:
  - Advanced hybrid formula strengthens molds and resists wear
  - Rapid and standard burnout enables immediate burnout in cone-shaped burnout units
  - Advanced burnout eliminates need for catalysts

**FORMULAS**

**POWERCAST**

- **FastFire Liquid**, **PC 15**, and **PC 15** are sold separately.
- **FastFire 15** and **PC 15** are investment-grade compounds for all types of investment casting.
- **FastFire Liquid** is recommended for high-fusing alloys.
- **PC 15** is measured at 100% concentration of FastFire Liquid.
- **FastFire Liquid** is recommended for freeze stable and PC 15.
- **FastFire Liquid** is used for high-fusing alloys.
- **PC 15** is used for all types of investment casting.
- **FastFire 15** is used for all types of investment casting.
- **FastFire 15** and **PC 15** are investment-grade compounds for all types of investment casting.
- **FastFire Liquid** is recommended for high-fusing alloys.
- **PC 15** is measured at 100% concentration of FastFire Liquid.
- **FastFire Liquid** is recommended for freeze stable and PC 15.
- **FastFire Liquid** is used for high-fusing alloys.
- **PC 15** is used for all types of investment casting.
- **FastFire 15** is used for all types of investment casting.
- **FastFire 15** and **PC 15** are investment-grade compounds for all types of investment casting.
- **FastFire Liquid** is recommended for high-fusing alloys.
- **PC 15** is measured at 100% concentration of FastFire Liquid.
- **FastFire Liquid** is recommended for freeze stable and PC 15.
- **FastFire Liquid** is used for high-fusing alloys.
- **PC 15** is used for all types of investment casting.
- **FastFire 15** is used for all types of investment casting.
- **FastFire 15** and **PC 15** are investment-grade compounds for all types of investment casting.
- **FastFire Liquid** is recommended for high-fusing alloys.
- **PC 15** is measured at 100% concentration of FastFire Liquid.
- **FastFire Liquid** is recommended for freeze stable and PC 15.
- **FastFire Liquid** is used for high-fusing alloys.
- **PC 15** is used for all types of investment casting.
- **FastFire 15** is used for all types of investment casting.
- **FastFire 15** and **PC 15** are investment-grade compounds for all types of investment casting.
- **FastFire Liquid** is recommended for high-fusing alloys.
- **PC 15** is measured at 100% concentration of FastFire Liquid.
- **FastFire Liquid** is recommended for freeze stable and PC 15.
- **FastFire Liquid** is used for high-fusing alloys.
- **PC 15** is used for all types of investment casting.
- **FastFire 15** is used for all types of investment casting.
- **FastFire 15** and **PC 15** are investment-grade compounds for all types of investment casting.
- **FastFire Liquid** is recommended for high-fusing alloys.
- **PC 15** is measured at 100% concentration of FastFire Liquid.
- **FastFire Liquid** is recommended for freeze stable and PC 15.
- **FastFire Liquid** is used for high-fusing alloys.
- **PC 15** is used for all types of investment casting.

- **FastFire Liquid** is recommended for freeze stable and PC 15.
### FAST “SPEED” BURNOUT

**CROWN AND BRIDGE**

**FASTFIRE 15**
- One investment for all C&B Alloys
- Powder-mix grain: 50/50
good for casting in less than an hour
- Quick burnout:
  - 15 minute bench set
  - 30 minute or overnight burnout

**PC 15**
- Investment for all Precious Ceramic Systems
- Powder-mix grain: 75/25
- Good for casting in less than an hour
- Quick burnout:
  - 15 minute bench set
  - 30 minute or overnight burnout

**POWERCAST**
- Cera-Fine, Fine-Grit, and Pre-gated Investment for High-Fusing Alloys
- Can be used with both bench and rapid temperature rise
- Good for high precision and intricate shapes
- Use conventional or rapid burnout techniques

**CONVENTIONAL BURNOUT**
- Same as PC 15

**HI-TEMP**
- Carbon-Free investment for Non-Preheated and Porcelain Alloys
- 30 Years of Successful Use
- 30 minute burnout
- Smooth, clear casting
- No additional investment required

**CERA-FINA**
- Carbon-Free investment for High-Fusing Alloys
- 30 Years of Successful Use
- 30 minute burnout
- Smooth, clear casting
- No additional investment required

### CHROME INVESTMENT

**X-20 CHROME**
- Phosphate investment for Casting Partial with Chromium Alloys
- 30 minute burnout
- Smooth, clear casting
- May be used with metal rings

**X-20 CHROME®**
- Phosphate investment for Casting Partial with Chromium Alloys
- 30 minute burnout
- Smooth, clear casting
- May be used with metal rings

### GYPSUM INVESTMENT

**BEAUTY-CAST**
- For Low-Fusing Crown and Bridge Alloys
- 15 minute burnout
- Smooth, clear casting
- No additional investment required
- Also control setting expansion by varying the number of grams of water in the investment

**NOVOCAST**
- For Low-Fusing Crown and Bridge Alloys
- Self-hardenable investment
- No need to control setting expansion
- No additional investment required

### PowerCast

**Concentration of Special Liquid Concentrate-PLUS:** 80% (4 parts liquid to 1 part water).

**Physical Properties:**
- **Compressive Strength, Wet (1 hour):** 700 psi (5 MPa), 500 psi (3.4 MPa), 500 psi (3.4 MPa)
- **Thermal Expansion:** 700° C (1,300° F) — 1.00%

**Product Numbers:**
- **38165**: 6 Pk./340 mL Bottles
- **38164**: 6 Pk./1 Liter Bottles
- **38161**: 1 Liter Bottle
- **Preweighed envelopes**

**Uses:**
- For use with FastFire 15
- For Low-Fusing Crown and Bridge Alloys
- **X-20 SPEED**

### Hi-Temp

**Carbon-Free Investment for High-Fusing Alloys:**
- **FastFire Liquid Concentrate:**
- **FastFire Liquid:**
- **PC 15**

**Physical Properties:**
- **Compressive Strength, Wet (2 hrs.):** 700 psi (5 MPa), 950 psi (7 MPa)
- **Thermal Expansion:** 700°–1,000° C (1,300°–1,800° F) — 1.50%

**Product Numbers:**
- **00124**: 144-75 g Packages
- **00108**: 144-50 g Packages
- **00078**: 24-50 g Packages

**Technical Details:**
- **Expansion Control:**
  - Technique the same for all types of castings
  - Expansion control by varying water/powder ratio

### Cera-Fina

**Carbon-Free Finishing Investment for High-Fusing Alloys:**
- **FastFire Liquid Concentrate:**
- **FastFire Liquid:**

**Physical Properties:**
- **Compressive Strength, Wet:** 2,500 psi (17 MPa), 1,850 psi (13 MPa)
- **Thermal Expansion:** 700°–1,000° C (1,300°–1,800° F) — 1.50%

**Product Numbers:**
- **00085**: 11 kg (24 lb.) Carton
- **Preweighed envelopes**

**Technical Details:**
- **Expansion Control:**
  - Technique the same for all types of castings
  - Expansion control by varying water/powder ratio

### Ceragold

**Phospho-Paste Investment Containing Carbon for Ceramic Gold Alloys — 30 Years of Successful Castings**
- **FastFire Liquid Concentrate:**
- **FastFire Liquid:**

**Physical Properties:**
- **Compressive Strength, Wet (2 hrs.):** 700 psi (5 MPa), 950 psi (7 MPa)

**Product Numbers:**
- **00125**: 9 kg (20 lb.) Carton
- **Preweighed envelopes**

**Technical Details:**
- **Expansion Control:**
  - Technique the same for all types of castings
  - Expansion control by varying water/powder ratio

### Gypsum Investment

**Crown and Bridge**

**Product Numbers:**
- **00415**: 144-100 g Packages
- **00407**: 144-60 g Packages
- **00361**: 11 kg (25 lb.) Carton

**Technical Details:**
- **Expansion Control:**
  - Technique the same for all types of castings
  - Expansion control by varying water/powder ratio

### Novocast

**Crown and Bridge**

**Product Numbers:**
- **00105**: 9 kg (20 lb.) Carton
- **Preweighed envelopes**

**Technical Details:**
- **Expansion Control:**
  - Technique the same for all types of castings
  - Expansion control by varying water/powder ratio

### Beauty-Cast

**For Low-Fusing Crown and Bridge Alloys**

**Technical Details:**
- **Expansion Control:**
  - Technique the same for all types of castings
  - Expansion control by varying water/powder ratio

**Product Numbers:**
- **00067**: 11 kg (24 lb.) Carton
- **Preweighed envelopes**

**Technical Details:**
- **Expansion Control:**
  - Technique the same for all types of castings
  - Expansion control by varying water/powder ratio

### X-20 Chrome

**Phosphate Investment for Casting Partials with Stainless Steel Alloys**

**Technical Details:**
- **Expansion Control:**
  - Technique the same for all types of castings
  - Expansion control by varying water/powder ratio

**Product Numbers:**
- **00435**: 144-90 g Packages
- **00427**: 144-60 g Packages
- **00362**: 11 kg (25 lb.) Carton

**Technical Details:**
- **Expansion Control:**
  - Technique the same for all types of castings
  - Expansion control by varying water/powder ratio

### X-20 Speed

**Phosphate Investment for Making Partial Ceramic Frameworks in Half the Time**

**Technical Details:**
- **Expansion Control:**
  - Technique the same for all types of castings
  - Expansion control by varying water/powder ratio

**Product Numbers:**
- **27384**: 50-400 g Packages
- **Preweighed envelopes**

**Technical Details:**
- **Expansion Control:**
  - Technique the same for all types of castings
  - Expansion control by varying water/powder ratio

### Gyrospeed

**Phosphate Investment Containing Carbon for Ceramic Gold Alloys — 30 Years of Successful Castings**

**Technical Details:**
- **Expansion Control:**
  - Technique the same for all types of castings
  - Expansion control by varying water/powder ratio

**Product Numbers:**
- **00180**: 11 kg (24 lb.) Carton
- **Preweighed envelopes**

**Technical Details:**
- **Expansion Control:**
  - Technique the same for all types of castings
  - Expansion control by varying water/powder ratio

### Phospho-Gold

**Crown and Bridge**

**Technical Details:**
- **Expansion Control:**
  - Technique the same for all types of castings
  - Expansion control by varying water/powder ratio

**Product Numbers:**
- **00134**: 144-90 g Packages
- **00126**: 144-60 g Packages
- **00089**: 25-60 g Packages
- **Preweighed envelopes**

**Technical Details:**
- **Expansion Control:**
  - Technique the same for all types of castings
  - Expansion control by varying water/powder ratio

### Professional Burnout

**Crown and Bridge**

**Technical Details:**
- **Expansion Control:**
  - Technique the same for all types of castings
  - Expansion control by varying water/powder ratio

**Product Numbers:**
- **27200**: 50-90 g Packages
- **Preweighed envelopes**

**Technical Details:**
- **Expansion Control:**
  - Technique the same for all types of castings
  - Expansion control by varying water/powder ratio

### PowerCast

**For FastFire 15 and PC 15**

**Technical Details:**
- **Expansion Control:**
  - Technique the same for all types of castings
  - Expansion control by varying water/powder ratio

**Product Numbers:**
- **38183**: 100-100 g Packages
- **38176**: 25-100 g Packages
- **Preweighed envelopes**

**Technical Details:**
- **Expansion Control:**
  - Technique the same for all types of castings
  - Expansion control by varying water/powder ratio

### Hi-Temp

**Investment for All Precious Ceramic Systems**

**Technical Details:**
- **Expansion Control:**
  - Technique the same for all types of castings
  - Expansion control by varying water/powder ratio

**Product Numbers:**
- **27345**: 1.4 kg (3 lbs) Bale
- **27344**: 1.7 kg (3.7 lbs) Bale
- **27339**: 1.4 kg (3 lbs) Bale
- **27331**: 1.3 kg (2.8 lbs) Bale

**Technical Details:**
- **Expansion Control:**
  - Technique the same for all types of castings
  - Expansion control by varying water/powder ratio
**POLYVEST**

- Refractory Investment for Porcelains with Medium Range Thermal Expansion
- Advanced hybrid formula strengthens molds and increases lab productivity.
- Works equally well for all alloys and pressable ceramics.
- Recommended for all investment uses, one investment for both crown and bridge alloys.
- Smooth consistency promotes ease of investing and devesting.
- Preferred choice for all investment uses, one investment for both crown and bridge alloys.
- Recommended liquid: 15-minute benchset reduces processing time.

**V.H.T. INVESTMENT**

- Refractory Investment for Porcelain with High Thermal Expansion
- Advanced hybrid formula strengthens molds and increases lab productivity.
- Recommended liquid: 15-minute benchset reduces processing time.

---

**HIGH EXPANSION**

- Compressive Strength (after firing) 6,500 psi (46 MPa)
- Compressive Strength (1 hour) 6,000 psi (42 MPa)
- Thermal Expansion — 700° C (1,300° F) 0.65%
- Setting Expansion 0.20%

**LOW EXPANSION**

- Compressive Strength (after firing) 4,800 psi (34 MPa)
- Compressive Strength (1 hour) 2,500 psi (17 MPa)
- Thermal Expansion — 700° C (1,300° F) 0.80%
- Setting Expansion 0.20%

---

**SOLDERING INVESTMENT**

**HI-HEAT SOLDERING INVESTMENT**

- Preweighed envelopes facilitate easy weighing and handling.
- Recommended liquid: 15-minute benchset reduces processing time.
- Advanced hybrid formula strengthens molds and increases lab productivity.
- Recommended liquid: 15-minute benchset reduces processing time.
- Advanced hybrid formula strengthens molds and increases lab productivity.
- Good physical properties allow for easy benchset and 30-minute burnout.
- Recommended liquid: 15-minute benchset reduces processing time.
- Advanced hybrid formula strengthens molds and increases lab productivity.
- Good physical properties allow for easy benchset and 30-minute burnout.

---

**DISPOSABLE PLUNGERS**

- Easy to devest
- Smooth and stackable consistency
- High strength and heat-shock resistant
- Recommended liquid: 15-minute benchset reduces processing time.

---

**REACTIVE PLUMBERS**

- Easy to devest
- Smooth and stackable consistency
- High strength and heat-shock resistant
- Recommended liquid: 15-minute benchset reduces processing time.

---

**REFRACTORY INVESTMENTS**

**SOLDERING INVESTMENTS**

- Quick to devest
- Recommended liquid: 15-minute benchset reduces processing time.

---

**PHOSPHATE INVESTMENTS**

**SUPER CONCENTRATE**

- Recommended liquid: 15-minute benchset reduces processing time.

---

**INVESTMENTS**

- The universal investment for all alloys and pressable ceramics.

**FORMULA 1**

- The high-performance, universal investment meets equally for all alloys and pressable ceramics. Its wide expansion range allows the technician to achieve optimal fit for a variety of materials. The robust bimodal nature of Formula 1 strengthens molds and promotes easier devesting while working on more fragile materials such as all-ceramic restorations. Using only a 15-minute benchset and 30-minute burnout, Formula 1 reduces processing time and increases lab productivity.

**CARE**

- Use the investment for both crown and bridge alloys and pressable ceramics.
- Wide expansion range.
- High strength and heat-shock resistant.

---

**INVESTMENTS**

- Advanced hybrid formula strengthens molds and increases lab productivity.
- Rapid and standard burnout produces requirements and changes in laboratory settings.
- Advanced hybrid formula strengthens molds and increases lab productivity.

---

**SOLDERING INVESTMENTS**

- For all Soldering Purposes
- High strength and heat-shock resistant
- Smooth and stackable consistency for easy investing

---

**DISPOSABLE PLUNGERS**

- For use with Pressable Ceramics
- Enhance Oral Hygiene and Contraction Stability Molds and the Plunger
- Between Molds and the Plunger
- Enhance Uniform Expansion and Contraction

---

**INVESTMENTS**

- Recommended liquid: 15-minute benchset reduces processing time.
- Advanced hybrid formula strengthens molds and increases lab productivity.
- Recommended liquid: 15-minute benchset reduces processing time.
- Advanced hybrid formula strengthens molds and increases lab productivity.
- Recommended liquid: 15-minute benchset reduces processing time.

---

**REACTIVE PLUMBERS**

- Recommended liquid: 15-minute benchset reduces processing time.

---

**DISPOSABLE PLUNGERS**

- For use with Pressable Ceramics
- Enhance Oral Hygiene and Contraction Stability Molds and the Plunger
- Between Molds and the Plunger
- Enhance Uniform Expansion and Contraction
